

Name: Vessel Haul-out Structure
Owner: Krause Manufacturing
Sea-Lift Division
Location: Bellingham, Washington, USA
Products: Amercoat 370
PSX 700
Date: 2008

The KMI Sea-Lift is the easiest and quickest way to launch and haul boats with almost any hull design using a typical boat ramp. Craft can be moved at speeds to 5 mph and once there, they can be stored inches from each other, maximizing yard space.

KMI selected the following PPG PMC high-performance coatings system to protect the carbon steel structures:

- One coat of Amercoat 370 fast-dry multi-purpose epoxy
- One coat of PSX 700FD, the fast-dry version of PPG's patented engineered siloxane

This system will give the structures outstanding resistance to corrosion while providing gloss and appearance retention exceeding the best polyurethane.
